

Global Superstore – Regional Market Operations Policy

Markets Covered

Global Superstore operates across seven markets: United States, Canada, LATAM, Europe (EU), EMEA, Africa, and APAC. Each Region within a Market (e.g., West, East, Central, South within the US) follows the market-level rules below unless a region-specific exception is noted.

Warehouse and Fulfillment Zones

- **US and Canada:** Fulfilled from North American regional warehouses; fastest average fulfillment times across all Ship Modes.
- **LATAM:** Fulfilled from a regional hub with customs processing added to Standard and Second Class delivery estimates.
- **EU and EMEA:** Fulfilled from separate regional warehouses; cross-border orders within these markets may incur customs delays noted in the Shipping and Delivery Policy.

- **Africa:** Limited warehouse footprint; Same Day and First Class availability restricted to capital-city regions.
- **APAC:** Fulfilled from a regional hub with consolidated shipping batches, extending Standard Class return processing timelines.

Currency and Pricing

Sales, Profit, and Shipping Cost figures are recorded in USD-equivalent terms across all markets for consistent internal reporting, even though customer-facing pricing may be displayed in local currency at checkout.

Order Priority Weighting by Market

Critical and High Order Priority orders receive equal fulfillment weighting across all markets; however, actual delivery speed still depends on the Ship Mode availability described in the Shipping and Delivery Policy. A Critical order in Africa, for example, is fulfilled from the warehouse with the same urgency as one in the US, but transit time will differ based on regional Ship Mode limitations.

Category Availability by Market

Not all Sub-Categories are stocked in all markets. Furniture Sub-Categories (Bookcases, Tables) have lower stock depth in Africa and LATAM, which can result in Low Order Priority defaults for backordered items in those markets.

Compliance Notes

- EU and EMEA orders are subject to the 14-day cooling-off return period described in the Return and Refund Policy, in addition to category-specific windows.
- Markets with data-residency requirements (EU) store Customer ID and order records in region-local systems, though aggregated Sales and Profit figures still roll up into global reporting.
